PASSIVE IRRIGATION & DRAINAGE BOARDS

DipsBoards® are tailored for above-slab greening, offering passive irrigation, drainage, insulation, and waterproofing membrane protection

FLAT ROOF INSULATION

Flat roofs endure significant thermal stress, impacting waterproofing and construction. DipBoards® insulation boards shield against temperature fluctuations, ensuring reliable thermal insulation and structural protection.

dipsystems Insulation

PERIMETER INSULATION

Heat loss from subterranean buildings to the surrounding ground can be significantly reduced by installing technically approved DipBoards® perimeter insulation panels on the exterior of basement walls.

Perimeter insulation panels made of DipBoards® have good R-values and therefore strong thermal insulation properties.

In addition, they are stable under pressure at different installation depths and pressure loads, and are highly resistant to normal soil moisture.

dipsystems Insulation

UNDERSLAB INSULATION

Effective floor insulation prevents heat loss to the soil substrate.

DipBoards® excel in load distribution with high compression strength. Neopor's superior insulation allows thinner boards, reducing construction costs and providing added benefits.
